STAKEHOLDER REPORT

5 Business Insights from Sales Performance Data

Reporting period: January 2024 – December 2025
Prepared as a Week 11 Day 5 project | Data Analyst Intern 3M

Total Sales	**15,151,845**
Total Profit	**3,123,171**
Total Orders	**27,271**
Average Order Value	**555.60**

Executive Summary

The analysis covers 288 synthetic sales records across four regions and three product categories. It highlights year-over-year growth of 23.4%, a leading regional and category contribution, a strong fourth-quarter pattern, and a regional profitability gap. These findings are intended to demonstrate stakeholder reporting and should be validated against actual company data before business decisions are made.

Five Business Insights

01. Sales expanded year over year

What the data shows: Total sales in 2025 were 23.4% higher than in 2024.

Recommended action: Prioritize capacity and inventory planning for continued growth; validate whether the increase is sustainable with 2026 data.

02. North is the leading region

What the data shows: North contributed 29.5% of total sales and generated the highest regional revenue.

Recommended action: Protect the strongest region while testing which practices can be replicated in lower-performing regions.

03. Electronics is the largest category

What the data shows: Electronics represented 43.1% of sales, the largest category contribution.

Recommended action: Maintain availability of top-selling products and review category-level margin before expanding promotions.

04. Sales are seasonal

What the data shows: October–December accounted for 30.1% of all sales; the strongest month was 2025-12.

Recommended action: Plan stock, staffing, and campaign budgets ahead of the fourth-quarter demand period.

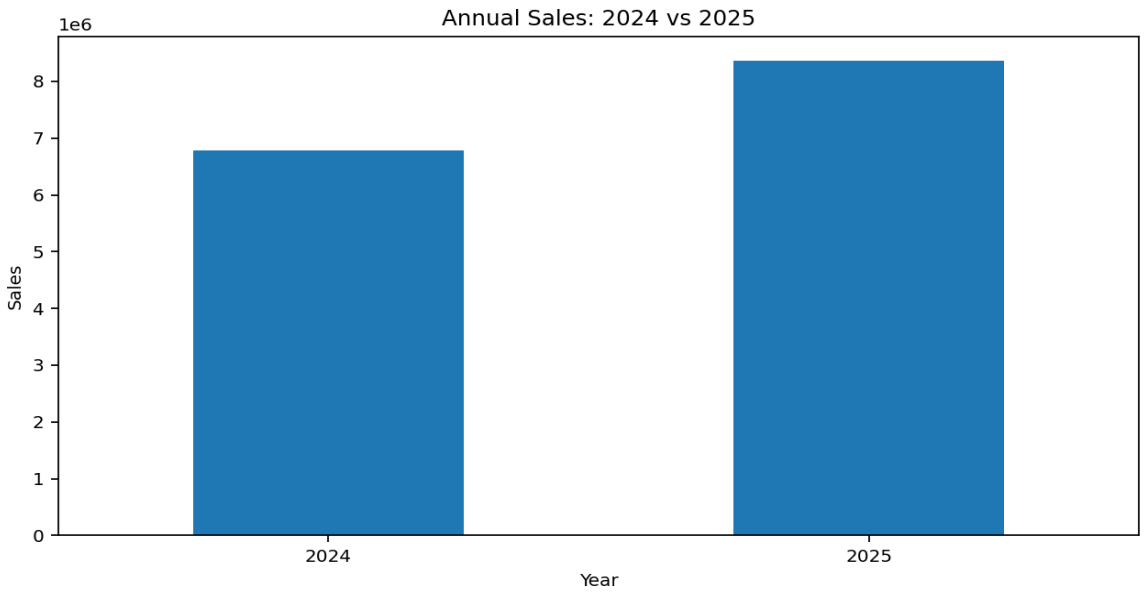

05. East region has a margin opportunity

What the data shows: East recorded a 15.7% profit margin, the lowest among the four regions.

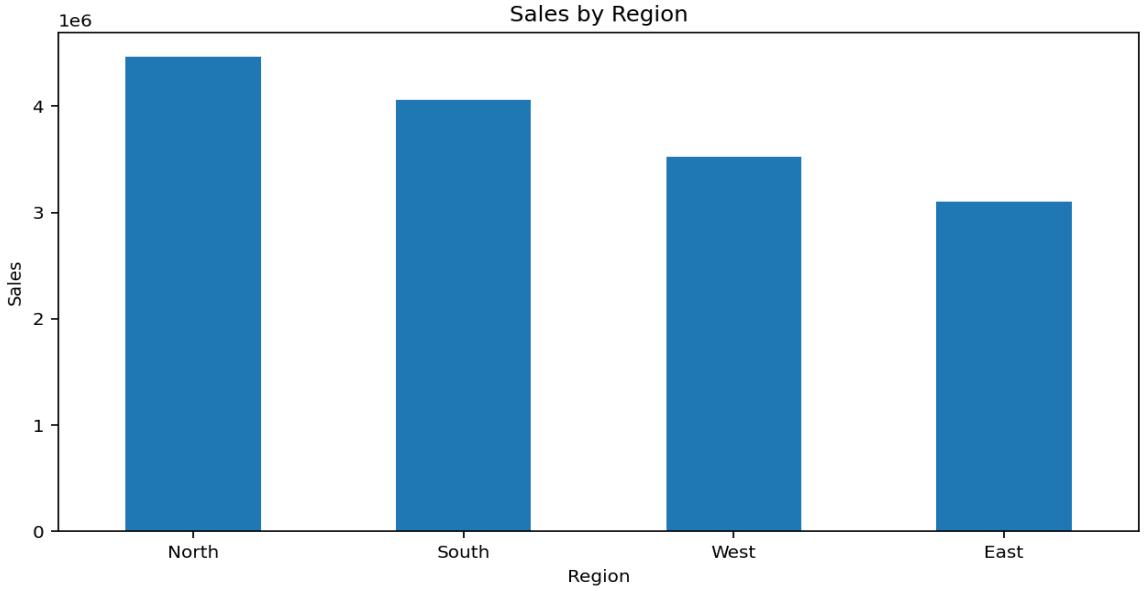

Recommended action: Review discounting, product mix, logistics, and acquisition costs in East before increasing sales volume.

Methodology, Assumptions & Limitations

The dataset is synthetic and reproducible. It contains one aggregated monthly record for each region and product-category combination (24 months × 4 regions × 3 categories = 288 rows). Sales, profit, and order counts were generated for demonstration. Revenue growth is calculated as (2025 sales ÷ 2024 sales – 1) × 100. Regional/category shares are calculated as each group's sales divided by total sales. Profit margin is total profit divided by total sales. Fourth-quarter contribution combines October, November, and December sales across both years.

Important: These figures are illustrative, not actual company results. The strongest month and all rankings reflect the generated dataset. Replace the synthetic CSV with approved business data before presenting findings as factual business performance.

Next Steps

1. Validate the five findings with stakeholders and real source systems. 2. Investigate East-region margin drivers at product and channel level. 3. Build a monthly KPI refresh and assign owners to each action. 4. Track action impact in the next reporting cycle.
